Silwa

life of the villagers—religion. Next to the mosques in appearance and cleanliness are some of the shops and stores. These must have a minimum standard of building requirements, according to official regulations. On the north side of the village stand the police station the post office and the elementary school. As to the fields, they extend to the west of the railway road up to the Nile bank, where the water-pumping works, established in 1932, stands with its modern buildings and garden and electric light.

It is worth mentioning here that each of the ten villages constituting the administrative unit of Silwa has its own name and is separated from its neighbours, however close these may be, by a recognized boundary, e.g. a high mound, a valley, or a stretch of gravel or sand. Each of these villages (or two villages combined, as in the case of four of the villages) has its mosque and village saint tomb with a cemetery attached to it. In spite of the fact that all the villages attached to Silwa trace their origin to one ancestor, as will be discussed later, their spatial separation is associated with sub-divisions in their kinship relations.

The physical characteristics of the inhabitants of these villages show a considerable degree of homogeneity. With their dark skins and long heads, they seem to conform to the ancient Southern Egyptian type.[1] All the inhabitants of Silwa, however, take great pride in describing themselves as descendants of Arab stock related to the Prophet. They refer to their traditions and customs and even their dress as 'Arabian'. Whether their claim is true or not, the belief is of central importance as one of the cohesive forces in the village community, and it is the means by which the villagers, especially the older generation, distinguish their way of life from that of others.[2]

The rhythm of daily life in Silwa hardly varies. The break of dawn witnesses the muazzin calling for morning prayers, youths and men, mounted on their donkeys or camels, call on each other to climb the hills to fetch the fertilizer. By sunrise, most men and boys are heading towards the fields with their cattle and tools; and by broad daylight the village seems

[1] A. Batrawi, who has studied the physical anthropology of Egyptians, maintains that there is some justification for the usual division of Egypt into Upper and Lower Regions as far as the cephalic index is concerned. The people of Upper Egypt have longer but narrower heads, and longer fingers, feet and forearms than those of Lower Egypt. His study of the living samples of modern Egyptian population from all over Egypt suggests that they conform more closely to the Ancient Southern type. Moreover, the distribution of blood groups in present-day Egypt shows that the mass of the population is very homogeneous and there are no significant differences in this respect between the Moslems and the Copts. 'The Racial History of Egypt, Part II— Relationships of the Ancient and Modern Population of Egypt and Nubia', in *Journal of Anthropological Institute*, Vol. LXXVI, 1946, pp. 131–55.

[2] Arab genealogies must be accepted with great caution. The notion of the Arabs as a conquering race, known for their gallantry, honour and power, played effectively on the minds of the indigenous stock of the fellaheen, who showed an earnest desire to be considered members of that race. Many fellaheen have succeeded in linking themselves to an Arab tribe. A. Ammar, *The People of Sharqiya* (Ph.D. thesis, Manchester University), pp. 19–21.

343 in bigger villages the house of a notable or a successful merchant.

251 Within easy reach of the village on the side facing the
343 fields are the *shoonas* or depôts for storing crops, together with offices and officials' houses, and the *ilzamiya* or compulsory school.

● 344 Now let us go inside the village. In a clean and acces-
485 ible corner, better cared for than all the other houses, there may be sometimes a "rest-house" or *madyafa* of two or three rooms, kept by the *omda* for the use of Government officials and travellers. This building belongs either to the Irrigation Department or to the Ministry of the Interior. There are Government rest-houses in about 400 villages.

361 Let us penetrate to the heart of the little town. What
363 we have seen up to now has given us no idea of what to expect. All is dust and disorder. There is no plan or system, and not a single straight line. The only thing in common with a modern city is the congestion due to lack of building space. The alleys, strewn with dung and rubbish, are so narrow that three people cannot walk abreast; they are less than two yards wide. There is no hope of driving through, and hardly of riding through on donkey-back. However, in some places where there is more movement, the buildings are of necessity less crowded, as in front of the *omda's*
[364 house or the school, and in the business quarter, which
366] contains the little open shops of the tailor, the grocer, the potter, and the weaver, and, if the village is large enough, a café. There are many villages without a single shop, so that it is impossible to buy anything at all, except from an
[443] occasional pedlar. In some villages the system of barter is still in use, corn, for example, being exchanged for salt.

491 No main road ever goes through a village as in England
363 or France. The hamlet is a compact mass of buildings,
361 standing aside from the road, canal or river; wheeled vehicles cannot enter it. That is why so few foreigners, missionaries and, indeed, well-to-do Egyptians except the *'omda* and the *sarraf*, know anything of its inner life. To get a picture of
622 this, we must first describe the leading characters.
647 We have already met the *'omda* and the *sarraf*, who link the fellah to the Government, and the *nazir*, his link with the
143 landowner. Another connection with the civilised world is
563 provided by the *baqqal*, often a Greek, who performs the
